RECOMMENDED STEPS FOR APPLICATION

Scalecoat Paint requires no primer, and if properly applied, one thin coat will cover and adhere so tightly it is almost impossible to get off.

- Disassemble model completely, be certain to remove all parts that will not accept at least 175 degree temperature.
- Thoroughly clean all parts to be sprayed, using any type of household cleanser or cleaner. Clean and rinse with extremely hot water. Oven dry or air dry all parts.
- If brushing, no thinning is required. If spraying, the recommended air pressure is 18 to 25 psi.
- Using Scalecoat thinner, thin paint to at least a 2 to 1 ratio (amount of thinner can vary with color. Some thicker pigments, reds & oranges in particular, may require slightly more or less thinner. 2 parts paint to 1 part thinner is a good general starting point). Test spray on the inside of the model before application.
- Apply the paint with even strokes at a distance of about 6 inches away from the model.
- Preheat your oven to 175 . The model should be "baked" for approximately 2 hours. Better adhesion of the paint will result if the model is oven or heat dried. (A hand held hair dryer will work fine).
- If more than one color is to be applied, oven dry at least 20 minutes between colors.
- Because of the high gloss finish of Scalecoat it will accept decals without any other preparation.
- To protect the finish and hide any decal film, use Scalecoat Gloss or Flat Glaze, they are compatible and we recommend a 2/3 gloss to 1/3 flat mixture to achieve a nice satin finish. Whatever finish you choose, use Scalecoat thinner, and mix a ratio of at least 1 part over spray to 1 part thinner.
- Application of Scalecoat II is identical to Scalecoat I with the exception of the "baking" process. With Scalecoat II paint a special additive, #54 Quick-Dry may be added to the paint to speed drying time. Mix with the paint at a 1 to 1 ratio and thin to the desired consistency.
